

Stop Watch User Guide

This guide is an attempt to answer any and all questions you might have about how to use *Stop Watch*. We will review all of the features of *Stop Watch* to do so.

Tabs

There are 3 tabs at the bottom of the screen. “Stop Watch”, “Timer”, and “Settings”. “Stop Watch” is where the clock counts up. You can add and delete laps/splits and other stop watch related activities. The “Timer” is where the clock counts down. “Settings” allows you to customize the layout and operation of the app.

Stop Watch

Tap the “Stop Watch” tab at the bottom of the screen to access

BASIC USEAGE

When you are ready to start timing something, simply tap the “start” button. The app will start counting and will continue to count even if you put the device to sleep, receive a phone call, switch to other apps, or exit the app.

After the stop watch is running, you can add a lap/split by tapping the “Lap” button. This will record the total time, the difference in time to the previous lap, and the time of day. You will notice two large labels at the top of the screen. The large black label is the total time. The smaller blue label to the right is the difference in time to the previous lap (split time). It is also possible to have a smaller blue label to the left. This is the average lap/split time. This feature can be enabled in settings.

Tapping the stop button will stop the overall counting as well as finish the split that was currently in progress.

To start timing a new event, tap the “New” button. Anything you had timed previously will be available later under the history automatically. There is no need to save anything!

EDITING SPLITS/LAPS

Stop Watch allows you to assign a custom name, number, and note to each and every lap if you wish. This can be useful for large events where there are lots of people or lots of data to track. To edit this information, simply tap on a split from the main screen. A new screen will slide in entitled “Split Details”.

Tap on the appropriate field you would like to edit, and enter the information you would like. If you update the distance for the split, the average speed will be recalculated automatically.

It is also possible to change all split/lap names or numbers. Tap the little “i” button next to the name or number to access these additional options. Choose “Change All” to cause a one time change to all splits/laps. Split numbers can also be sequentially changed. Choose “Sequentially Renumber All Splits” after tapping the “i” button to cause a one time change to all split numbers.

At the bottom of the “Split Details” screen is the delete button and all of the details for the split. Deleting a split cannot be undone. If you delete a split, all other splits and the total time for the stop watch will be updated to reflect the change in timing information. It is also possible to quickly delete a Split back on the main Stop Watch screen by swiping left on a split and tapping “Delete”.

TOOLS

On the main *Stop Watch* screen is a yellow bordered “Tools” button. This is where you can edit *Stop Watch* specific information, access your *Stop Watch* history, share data, and more.

Tap the “Tools” button to begin. Here you can add a name and notes for each event timed by *Stop Watch*, as well as see when the event was created and last modified.

To share your *Stop Watch* data, tap the action button at the top right of the screen. This will bring up different options depending on your device. The options can include: text message, email, twitter, Facebook, copying to your clipboard, and more. Tap which one you would like and send like you normally would which each service.

One of the most useful features is the “History”. Tap on the “History” button to see everything you have previously timed.

HISTORY

Every event you have timed is listed here. If you are no longer need a record of an event, you can tap the “Edit” button at the top right corner of the screen. Then tap the red arrow next to the event you want to delete. Then tap “Delete”. This action cannot be undone so be careful.

To see the details of a previous event, or to continue timing for a previous event, tap on it and you will be brought back to the main *Stop Watch* screen.

Timer

Tap the “Timer” tab at the bottom of the screen to access

BASIC USAGE

To get started, tap the “New” button to make a timer. A screen will slide in where you can give each timer a name and set the timer. The sections are broken up in seconds, minutes, hours, and days. Enter in the time you would like, then tap the “Save” button at the top right of the screen. The timer is now selected.

Note: You can also enter decimal times for new timers. For example: 2.54 in the hours field will convert to 2hr 32min 24sec when you tap done or deselect the hours field.

The interface for this mode is slightly different than the “Stop Watch” tab. In the middle of the screen is the list/history of Timers you have made. Tap on one to activate it. Now you can tap the “Start” button to start the timer. You can exit the app, receive phone calls, switch to other apps, or put the device to sleep and the timer will still go off when completed.

Once a timer is started, the expected completion time is shown in blue near the top of the screen. If you need to pause a timer, tap the “Stop” button. Once a timer finishes, it will automatically reset. If you need to reset a timer before it has completed, tap the yellow “Tools” button, then tap “Reset”.

TOOLS

Here you can reset a timer, change the timer name, and delete timers that you no longer need.

Settings

Tap the “Settings” tab at the bottom of the screen, then tap the “Settings” field to access. Alternately, you can access the settings through the Settings app on your device under “Stop Watch”.

If you are experiencing problems or have comments/suggestions, tap the “Feedback” button. Here you can enter your idea/problems. Please provide your email address if you would like a response from us.

FEEDBACK

The “Vibration” option enables/disables phone vibration when you tap the Start/Stop/Lap/New buttons. Not all devices support vibration.

The “Beep” option enables/disables a small beep sound when you tap the Start/Stop/Lap/New buttons. We utilize high performance audio programming to achieve a very low latency between tapping a button and hearing the beep.

The “Screen Flash” option enables/disables a whole screen flash when you tap the Start/Stop/Lap/New buttons. The flash is color coded to the button you pressed. This makes it easier to tell which button you pressed if visibility isn’t optimal.

OPERATION

The “Pre Start Countdown” option gives you a brief countdown before the stop watch starts counting up. For example, after enabling the Pre Start Countdown to 3 seconds and pressing “Start” for a stop watch: The timer counts 3...2...1... the new lap then starts, and the time continues counting from where it left off. This can be useful for the start of a race.

SPLIT DEFAULTS

The “Name” field will change the name that all new splits are automatically given.

The “Distance” field changes what distance all new splits are given.

INTERFACE

“Distance : Speed Units” changes the units that distances and speeds will be displayed and edited with.

“Split Type” changes the blue time on the stop watch screen from displaying the difference between the current and previous splits, to displaying the time of day when a split was completed.

“Time Format” changes how times are formatted.

“Large Time” will swap the black and blue times on the main stop watch screen between the total time and the split/time difference.

“Split 3rd Column Display” changes what will be displayed in the table on the main Stop Watch screen. It can be changed between total time and average speed.

“Average Split Time” will show the average of all splits within a stop watch near the top left of the main stop watch screen with a blue label.

“Split Sorting” in the interface section changes how splits are displayed on the main stop watch screen.

SHARING

“Split Sorting” in the sharing section changes how splits are displayed when you email/text/ share stop watch data with others.

If you have any further questions, contact us within the app using the “Feedback” button under settings or email us directly at mrrocketman2@gmail.com
